9. Palindrome Number

Easy 2810 1654 Add to List Share

Determine whether an integer is a palindrome. An integer is a palindrome when it reads the same backward as forward.

Follow up: Could you solve it without converting the integer to a string?

Example 1:

```
Input: x = 121
Output: true
```

Example 2:

```
Input: x = -121
Output: false
Explanation: From left to right, it reads -121. From right to left, it becomes 121-.
Therefore it is not a palindrome.
```

Example 3:

```
Input: x = 10
Output: false
Explanation: Reads 01 from right to left. Therefore it is not a palindrome.
```

Example 4:

```
Input: x = -101
Output: false
```

Constraints:

- $-2^{31} <= x <= 2^{31} - 1$
